

State-of-the-Art 3D Mammography only at Methodist.

Our 3D clarity gives you the most accurate results available today...even better than digital mammograms.

These vastly improved mammogram images, available only at Methodist Hospitals, make it easier for our radiologists to detect abnormalities, including small tumors hidden in dense tissue. That means you're less likely to endure a stressful false positive, or return for additional tests. With this new technology, Methodist Hospitals can now diagnose breast cancer at even earlier, more curable stages.

No physician referral is needed for a routine screening mammogram. To arrange a diagnostic mammogram, talk to your doctor.
